

EZO AssetSonar Shadow IT

Find the Gap. Fix the Gap.

EZO AssetSonar Shadow IT closes the blind spots of SaaS sprawl and rogue software by unifying visibility and remediation in a single platform. IT teams gain control over both installed and cloud software, ensuring compliance, reducing risk, and optimizing spend.

Unified SaaS + Installed Software Discovery

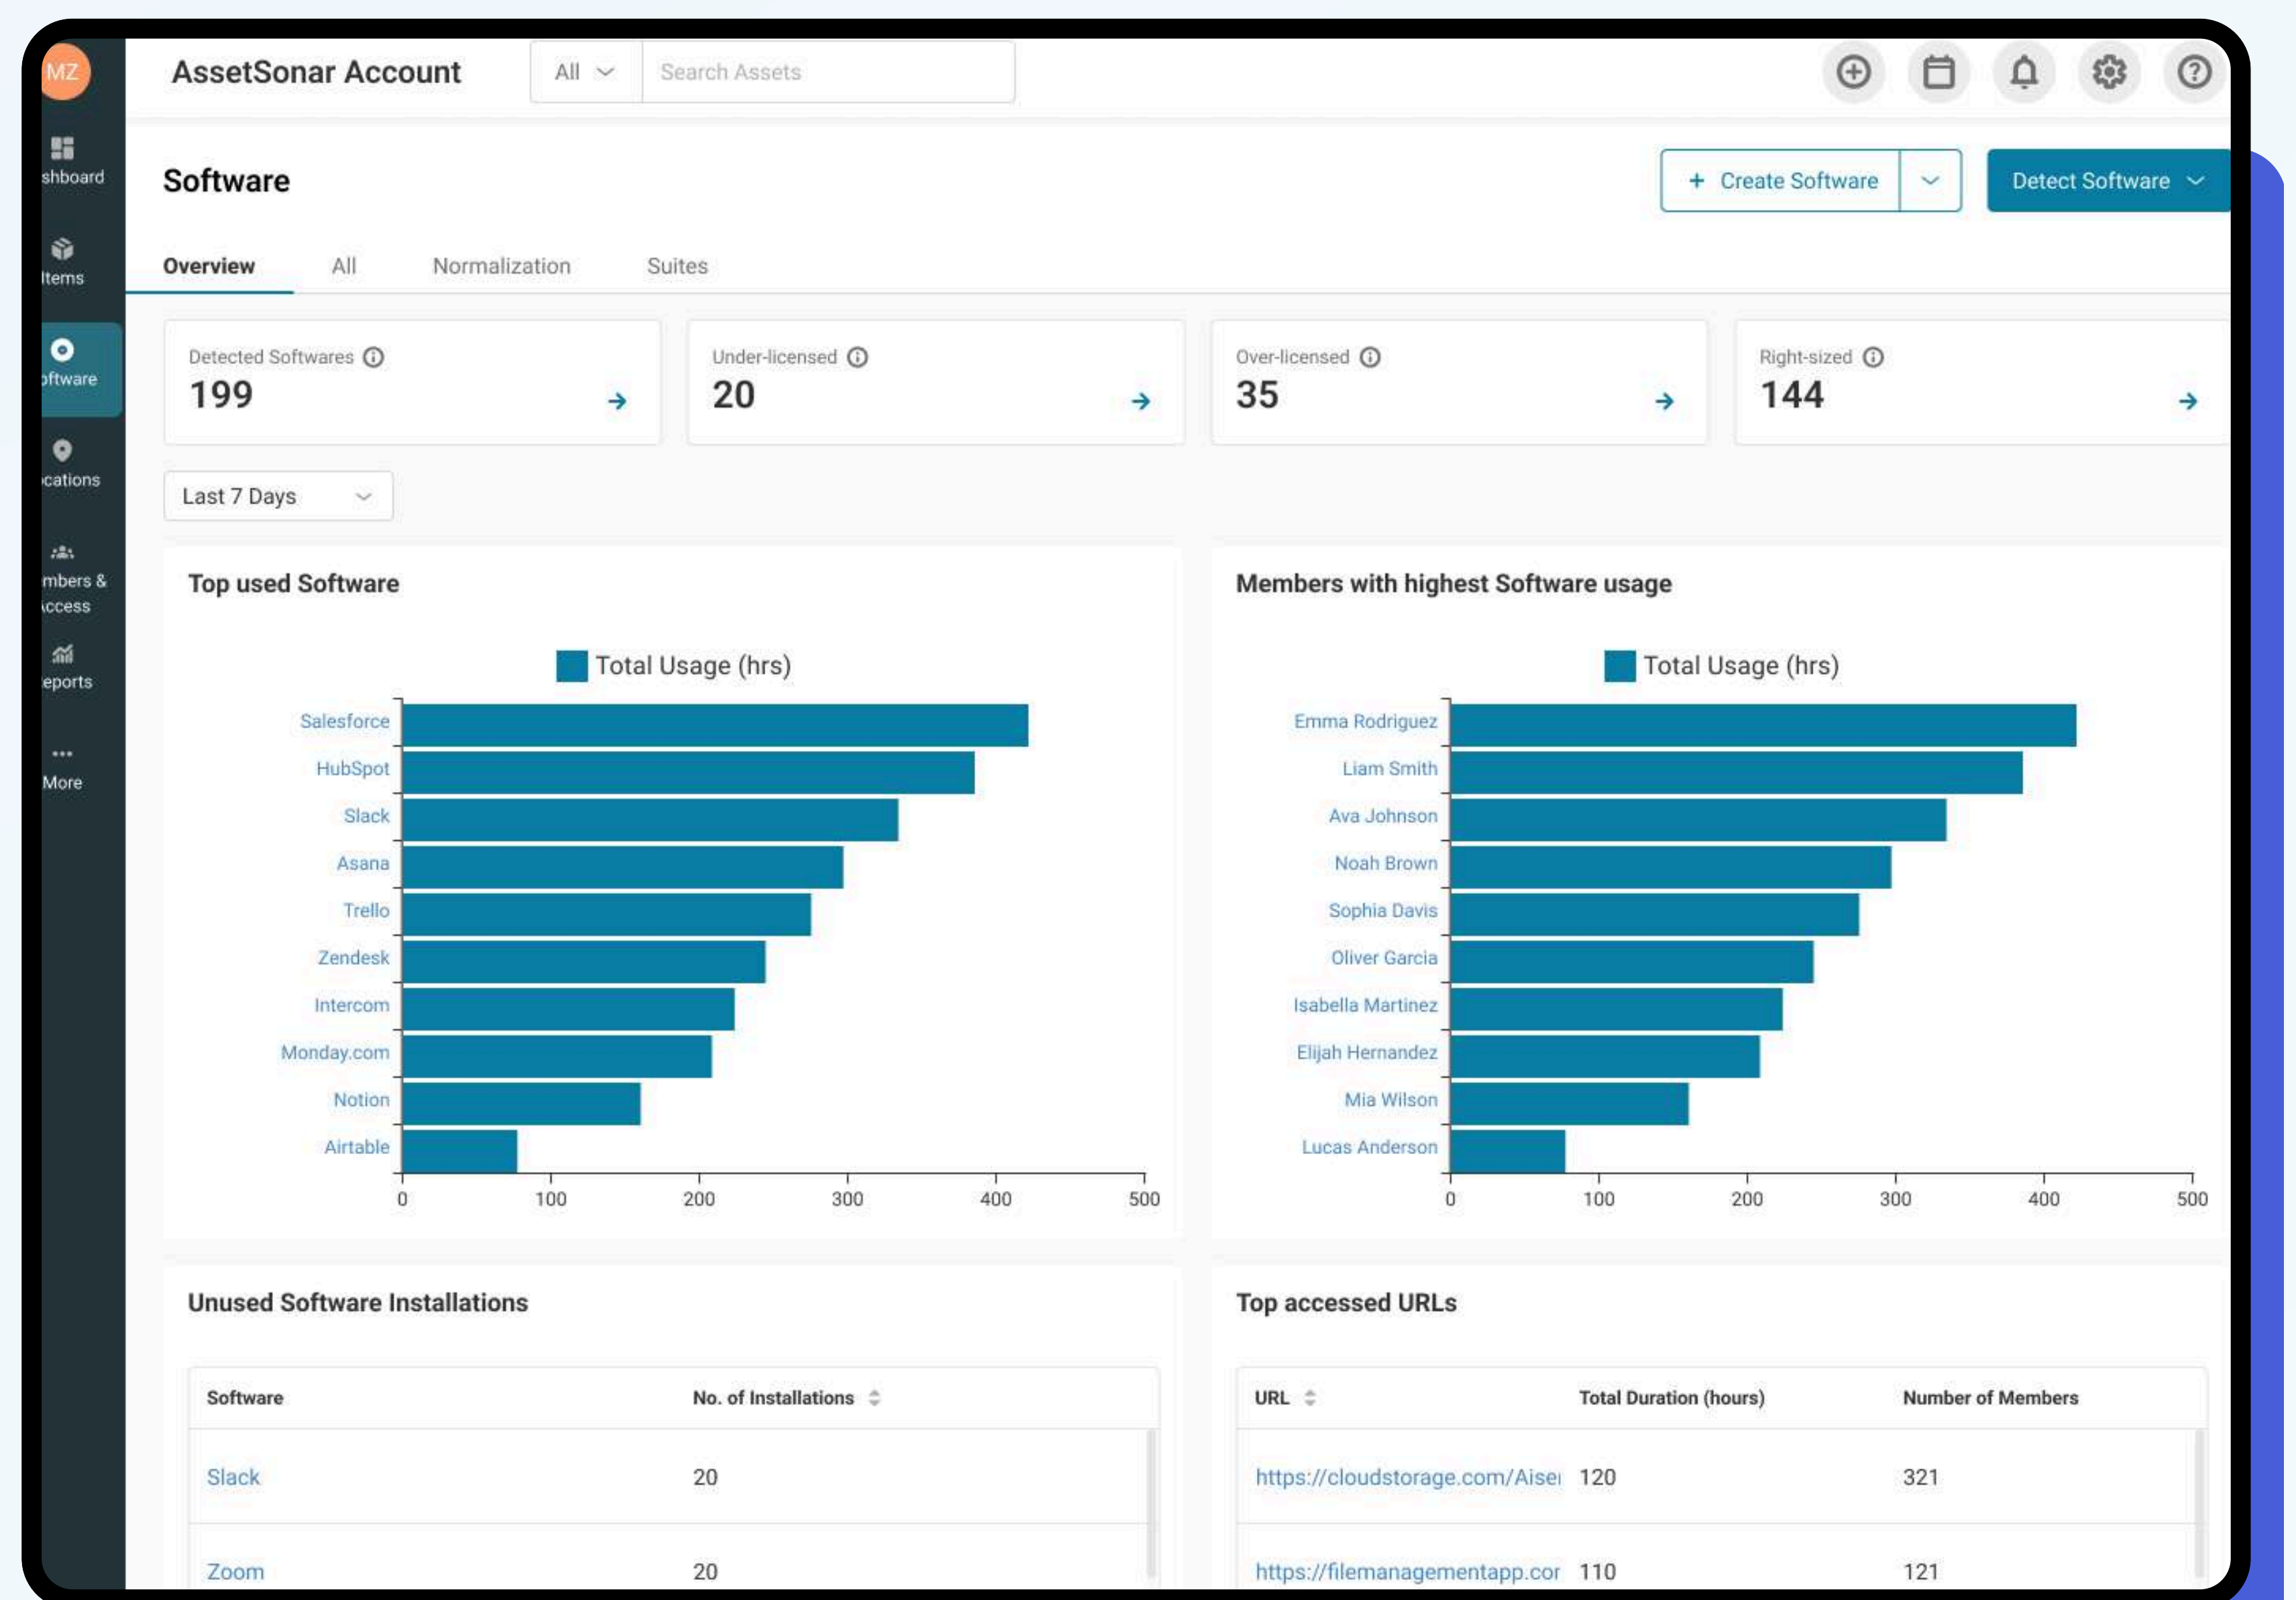

EZO AssetSonar unifies visibility across installed software, SaaS integrations, and browser activity to expose unapproved apps and risky domains

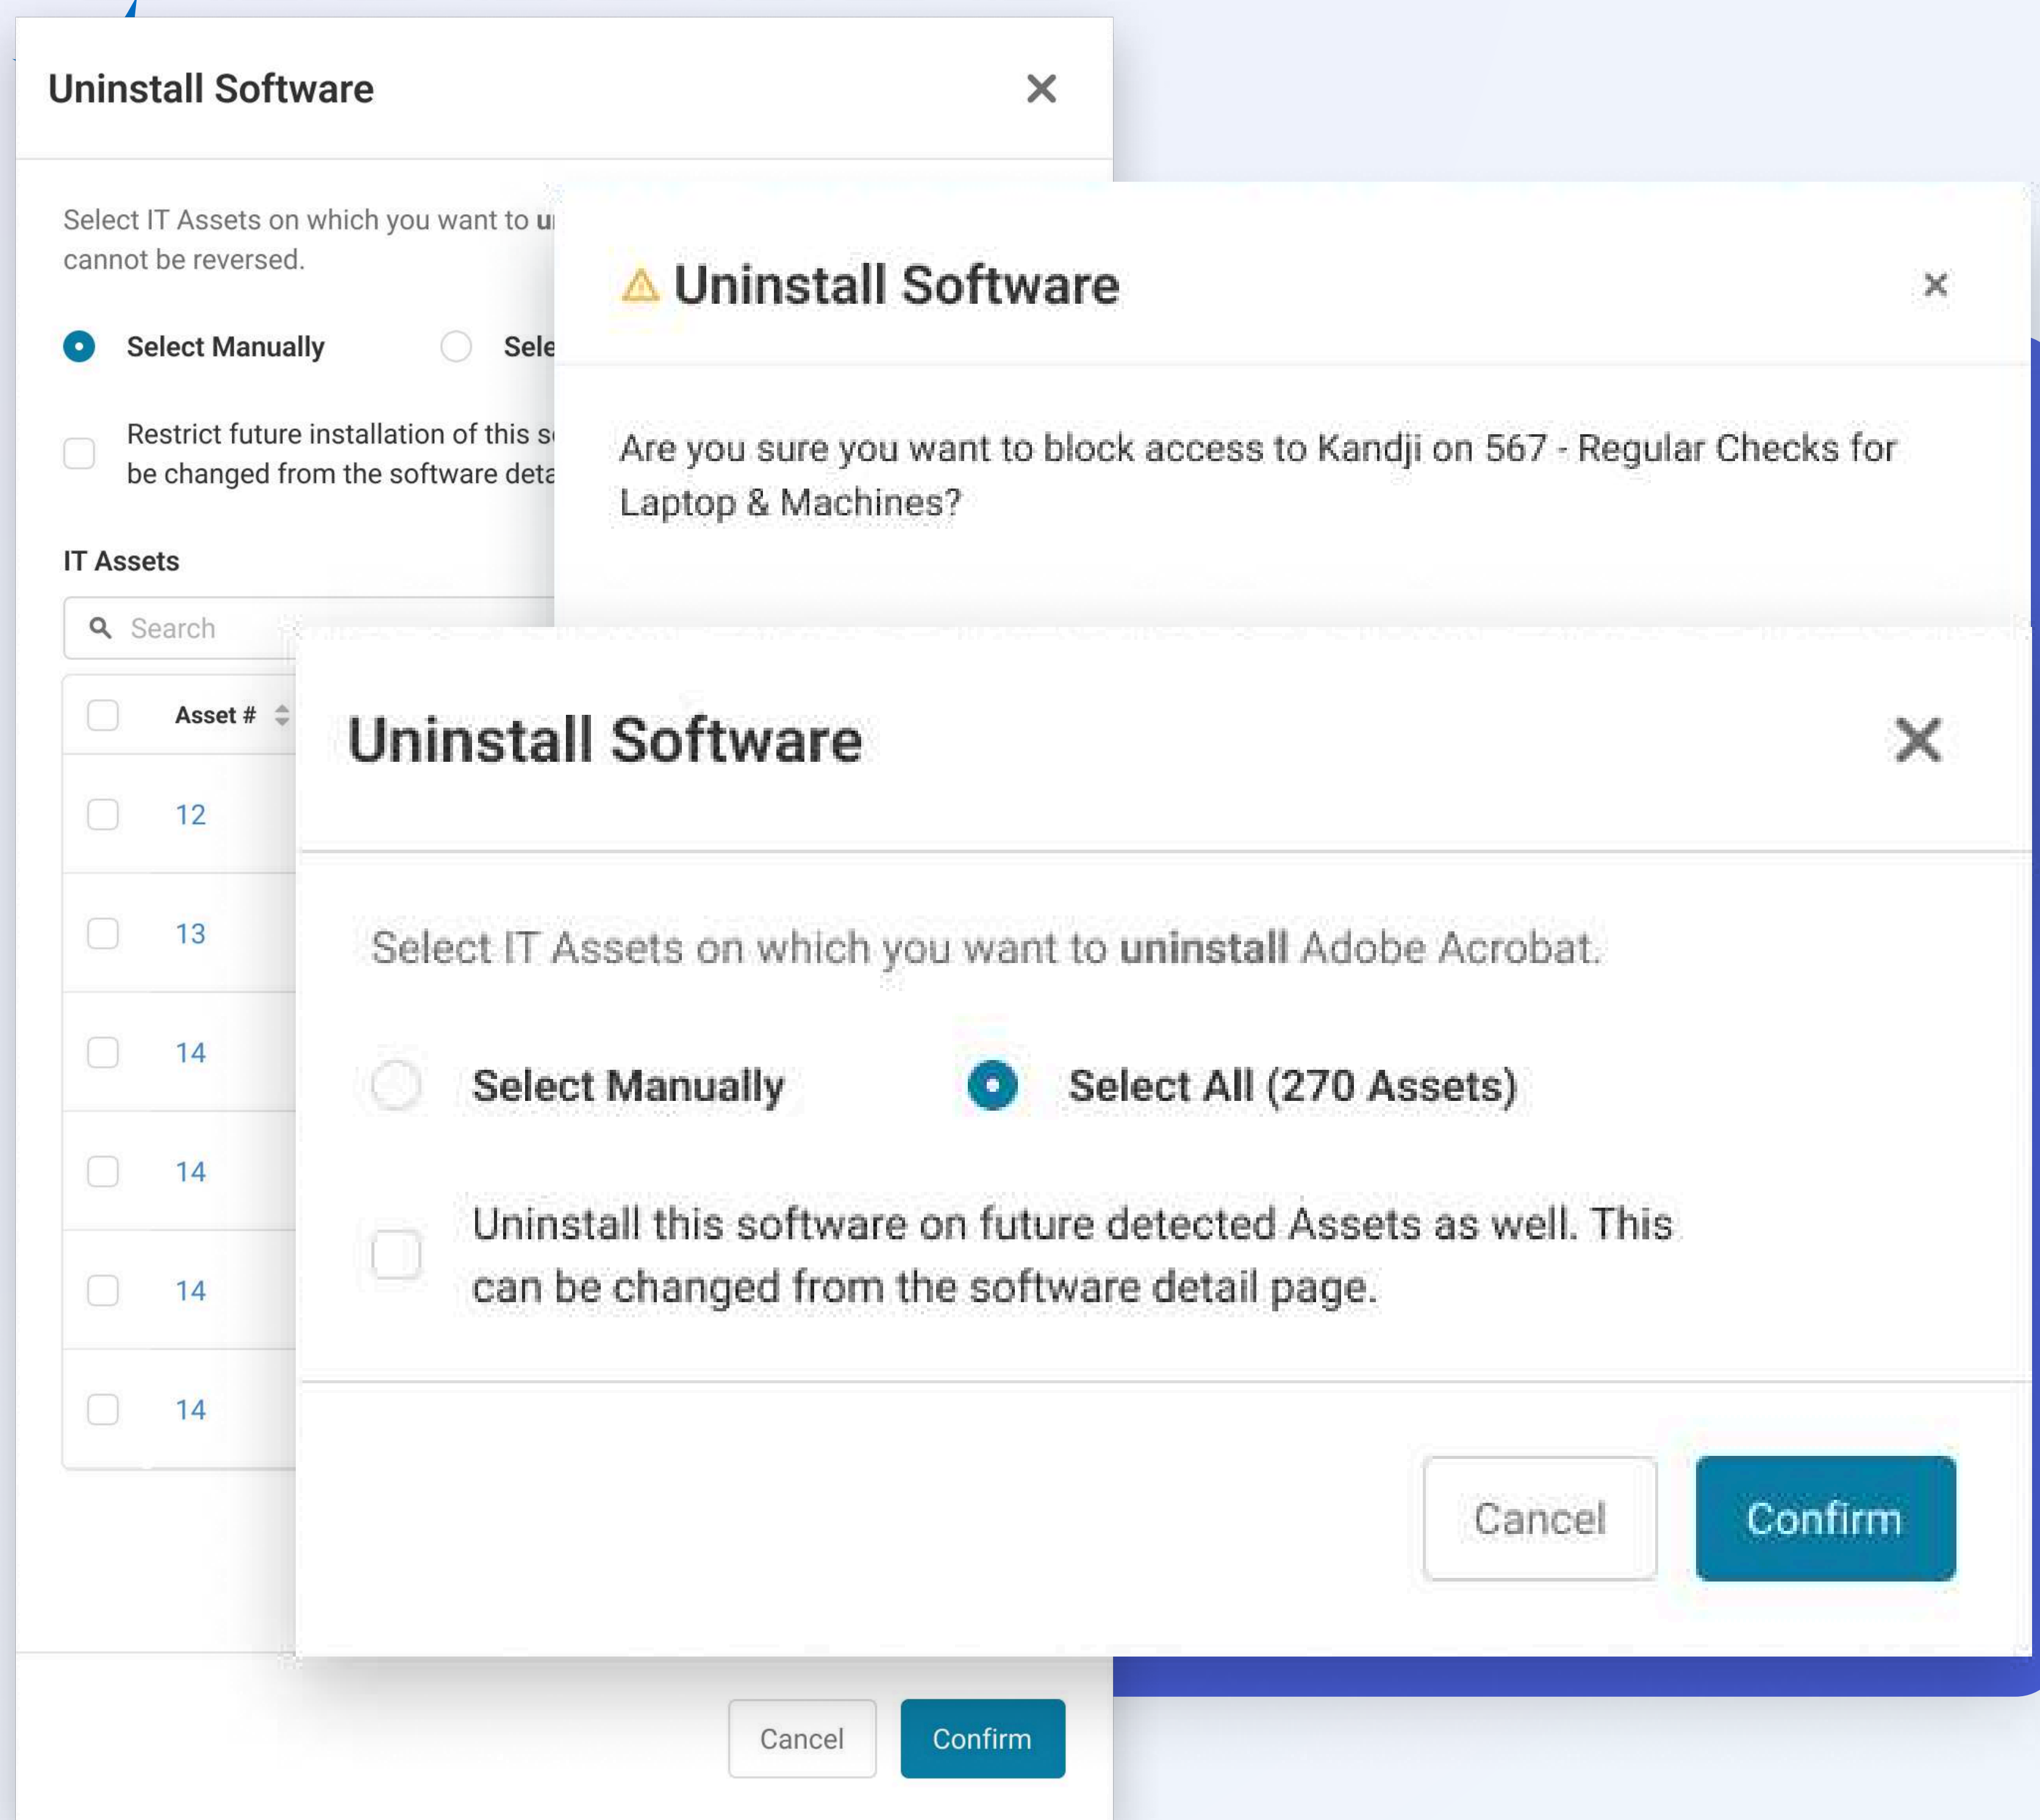

- Installed software captured through EZO AssetSonar agent and MDM integrations
- SaaS integrations and browser tracking uncover cloud usage and shadow apps

Usage and Shadow Activity Insights

EZO AssetSonar tracks adoption across licensed, unlicensed, and blacklisted apps. Browser tracking highlights unsanctioned domains, while dashboards deliver compliance and usage KPIs in real time.

- Measure actual usage, not just license counts
- Visualize adoption and compliance instantly

Endpoint and Browser Control

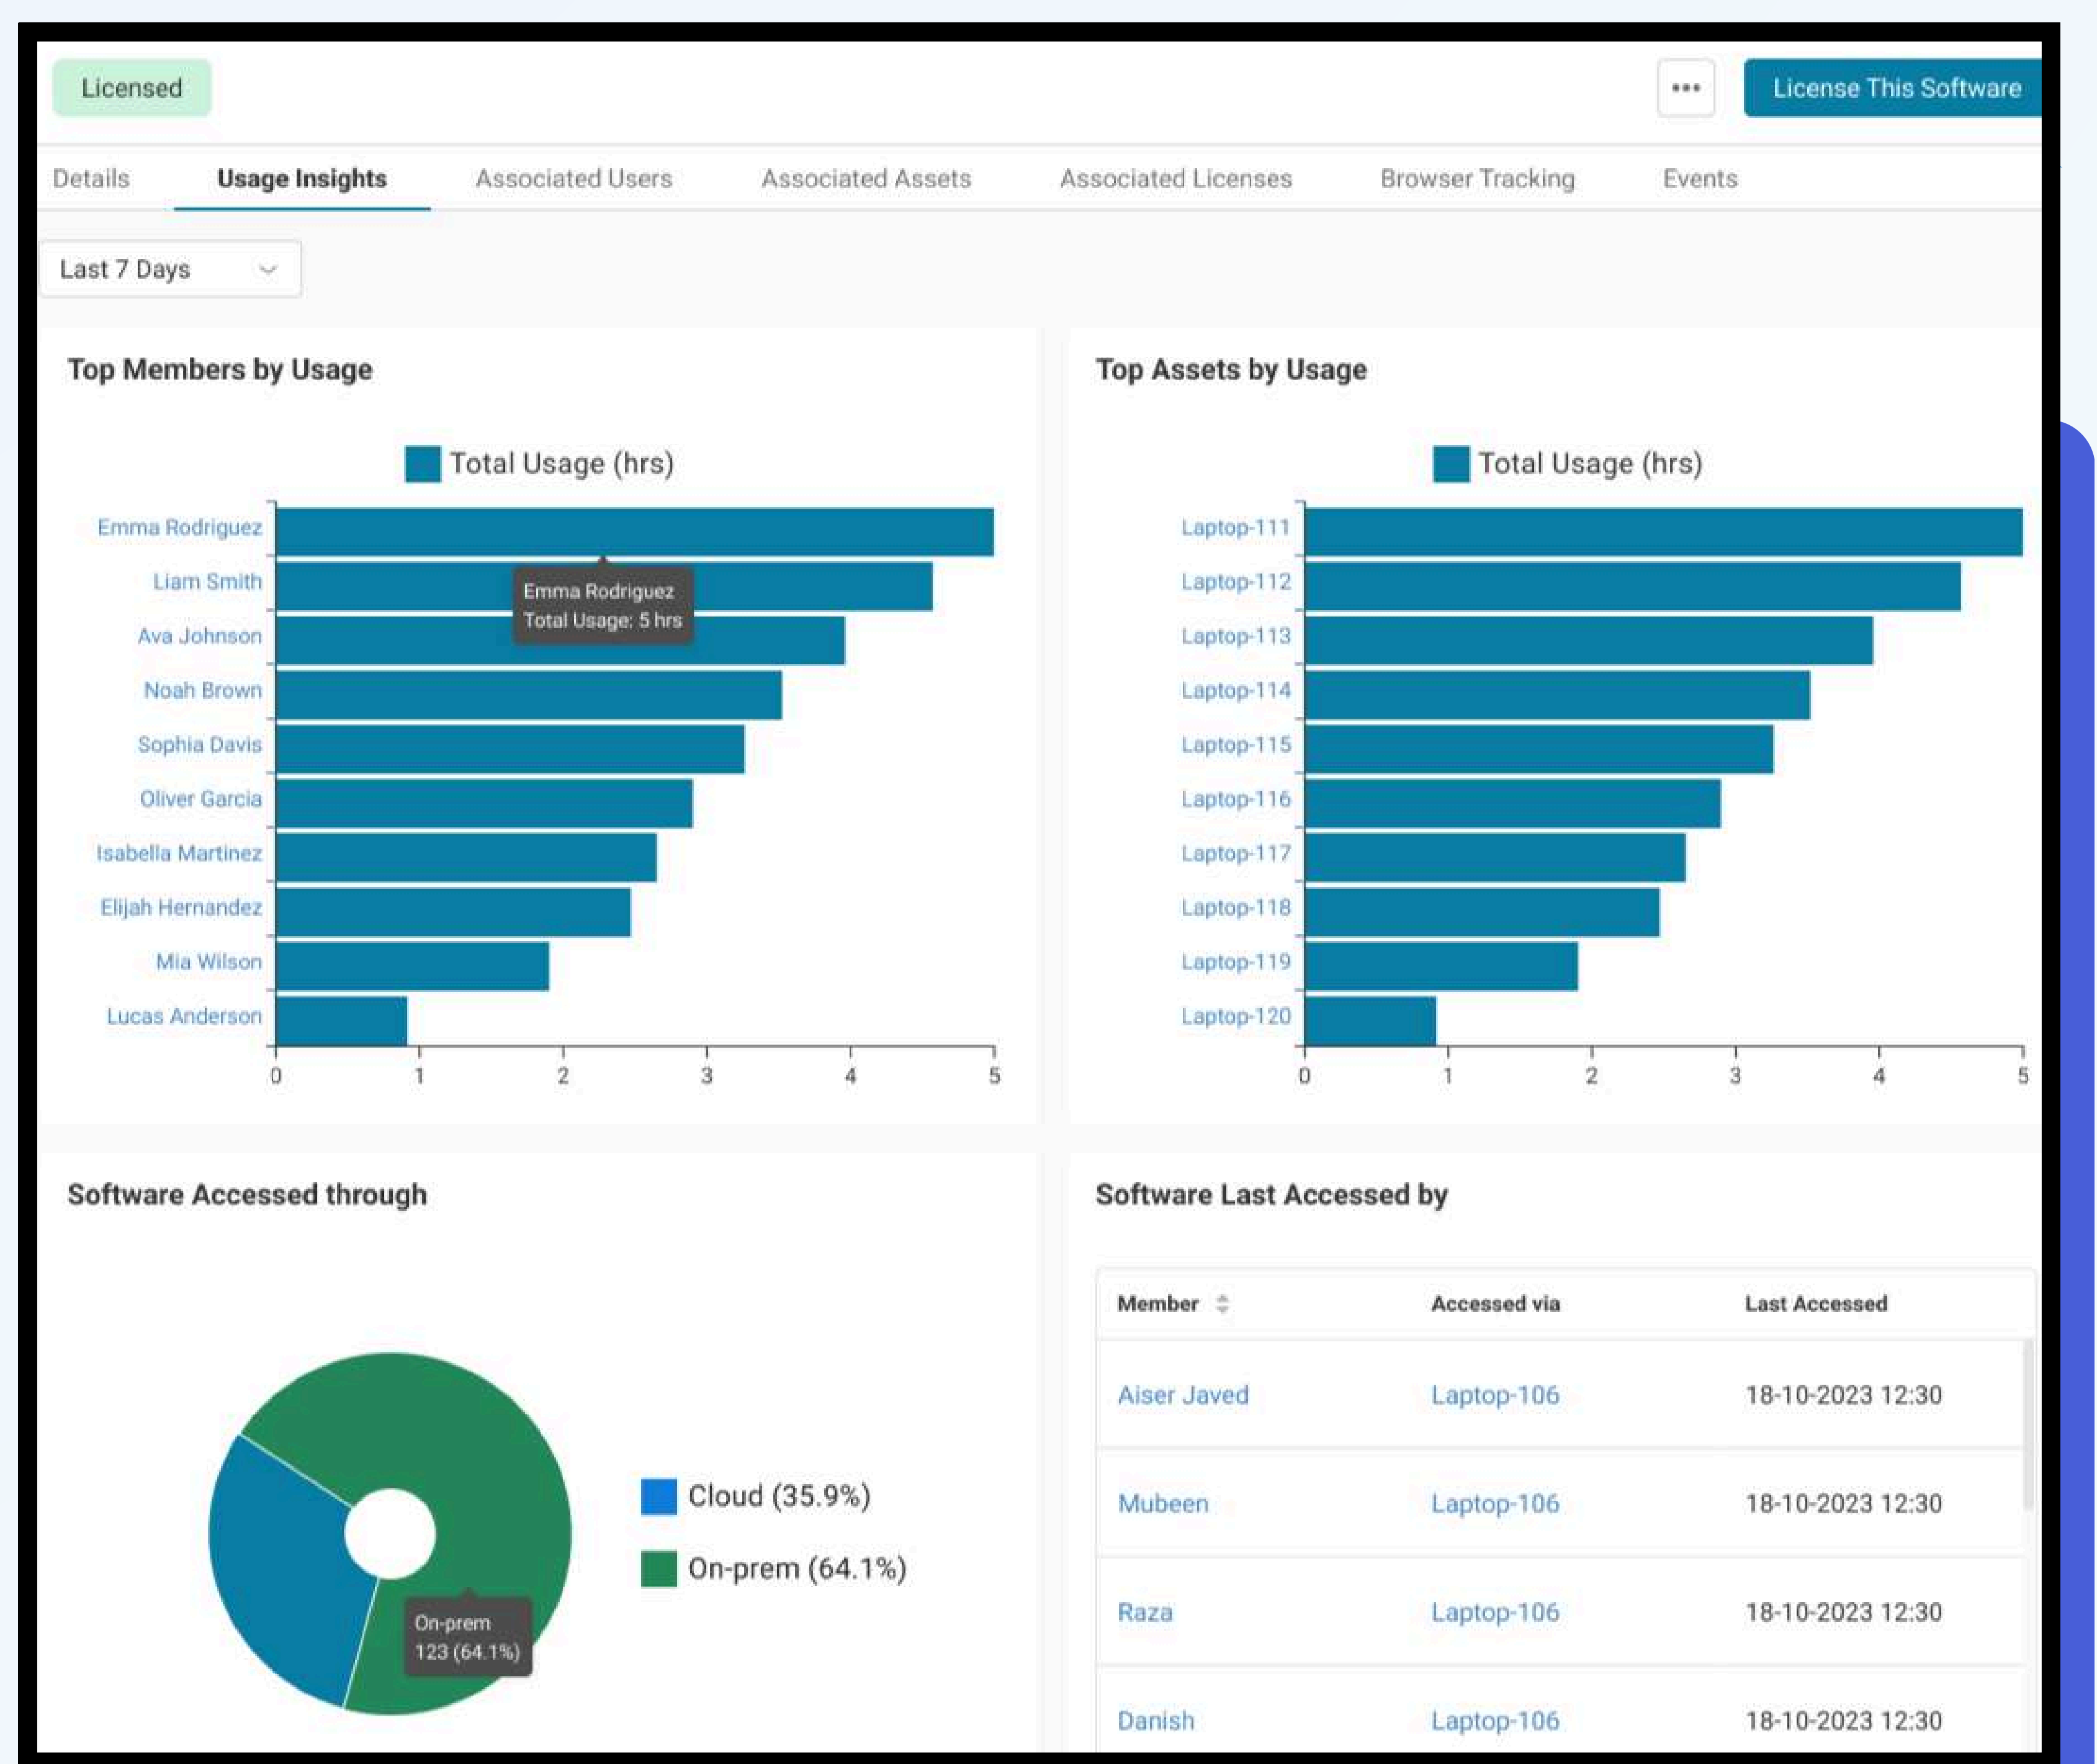

EZO AssetSonar enables IT teams to remotely uninstall unauthorized or blacklisted software from devices. Risky SaaS domains can also be blocked directly at the browser to stop shadow tools before they spread.

- Uninstall blacklisted software on endpoints
- Block unauthorized domains and extensions

Governance and Audit Confidence

EZO AssetSonar pairs risk-based visibility with audit-ready reporting. IT can prioritize action on the most critical software while exporting instant evidence of what was discovered, blocked, or removed

- Provide clear evidence of compliance and governance maturity
- Generate instant reports that showcase governance and remediation

EZO AssetSonar offers innovative asset intelligence and management solutions, trusted by thousands of organizations worldwide.
